DISCUSSION

The advantages is that it will show the detail for a specific state.

LAYOUT

Water Usage

Title: Australia water Usage

Author: Stephen Sun

Date: 12/10/2024

Sheet: 2

Task: Analysing Bar Charts

Operation

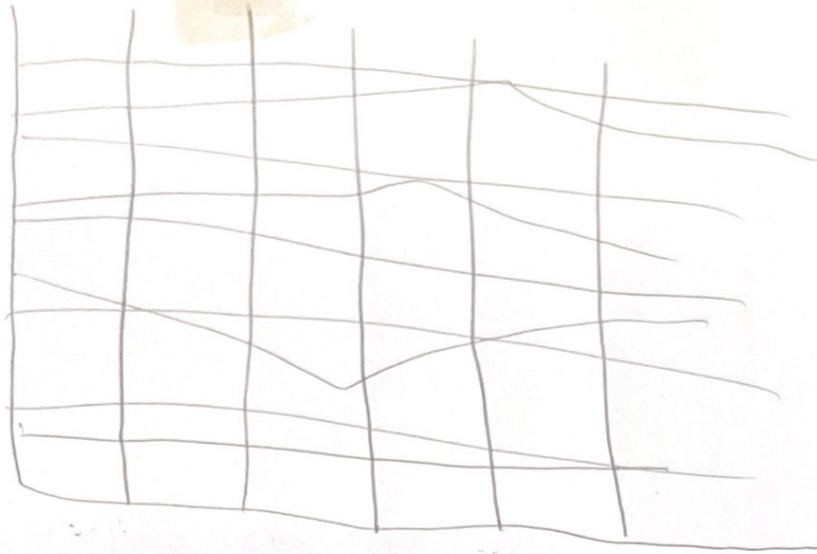

- When click the bar chart, it will show the value of water usage based on different state.
- Vehicles type is categorical data, fuel consumption is quantitative data.
- When selecting one & others ~~is~~ is going to be unclickable.

FOCUS

The central idea is that let users clearly see the water usage of each state, which one is the most, which one is the least, by clicking the bar, and showing the value of water usage.

DISCUSSION

- The benefit of vis is that can clear see the specific detail, and very clear and friendly for users.
- The drawbacks is that there will be so many states in X-axis, so X-axis will be too long.
